Submitted To: GitHub

Setting Up and Loading the Model

```
# Load the dataset
df = pd.read_csv('iris.csv')

print(df.head())
```

Training the data

```
# Select independent and dependent variables
X = df[['sepal_length', 'sepal_width', 'petal_length', 'petal_width']]
Y = df['species']

# Split the dataset into train and test
X_train, X_test, Y_train, Y_test = train_test_split(X, Y, test_size=0.3,
random_state=50)

# Feature scaling for independent variables only
sc = StandardScaler()
X_train = sc.fit_transform(X_train)
X_test = sc.transform(X_test)
```

Instantiating it, fitting and saving as pickle

```
# Instantiate the model
classifier = RandomForestClassifier(random_state=50)

# Fit the model
classifier.fit(X_train, Y_train)

# Save the trained model as a pickle file
pickle.dump(classifier, open("iris_model.pkl", "wb"))
```

Heroku Deployment
